Foraminal Encroachment

With a series of non-surgical treatments you will begin to enjoy the freedom from back and neck pain. Decompression Therapy is fast, effective, drug-free and safe. This exciting technology is cleared by the FDA and available to you today!

Decompression Therapy

Phase I consists of a 4-7 minute unattended Light Therapy treatment. By pre-treating prior to beginning Decompression, the patient benefits from relaxation of muscle spasms, and relief of minor muscle and joint aches.

Phase II consists of decompressing the intervertebral discs relieving pain associated with herniated discs, protruding discs, degenerative disc disease, posterior facet syndrome, and sciatica.
